

#### IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

In reapplication of Masami SUWAMA et al. Serial No. 10/808,437

Filed: March 25, 2004

Confirmation No. 6940

Docket No. 2004-0483A

Group Art Unit 1762

Examiner W.P. Fletcher, III

### PAINT FILM FORMING METHOD

### DECLARATION UNDER RULE 1.132 (No. 2)

Honorable Commissioner of Patent and Trademarks Washington, D.C.

Sir:

I, Masami Suwama, hereby declare as follows:

That I graduated, in March 1989, at Keio University, Department of Science and Engineering, and, in April of the same year, joined Kansai Paint Co., Ltd., where I was assigned to the Research Institute in the Development Center of the same company;

That I have since engaged in the research for the development of paint in the same Research Institute up to now;

That I am one of the co-inventors of U.S. Application Serial No. 10/808,437;

That the following experiments were carried out by myself, or under my supervision and control.

- 1. Production of hydroxyl-containing resins and oligomer:
- 1-1. Acrylic resin Nos. A-1 to A-10 were produced with use of monomer mixture of the composition as shown in Table 1B below, by the method of Production Example 1 as mentioned in the present specification, page 17, line 17 to page 18, line 7.
- 1-2. "Oligomer No. 1" was produced in accordance with the present specification, page 20, lines 1–13. Solids content was 98 %, number average molecular weight was 600, and weight average molecular weight was 610.
- 1.3. "Hydroxyl group containing polyester oligomer" was produced in accordance with Synthesis Example 1 in column 38, lines 35–55, of Marutani et al., U.S. Patent 6,040,009. Solids content was 95 %, number average molecular weight was 600, and weight average molecular weight was 600.

# 2. Production of clear paint Nos. C-1 to C-13:

Clear paint Nos. C-1 to C-13 were produced by the blending of components as shown in Table 2B below, in accordance with the method of Example 1 as mentioned in the present specification, page 20, lines 15-20.

# 3. Test:

Test panels were produced in accordance with the present specification, page 22, line 1 to page 25, line 11, and, thus, performances of each coating film were evaluated. Results are shown in Table 3B below.
